Brief description:

Loading transport box for four Zenit B200

Description text

A transport box (flight case) in the usual 60 × 60 truck size grid must be supplied. The flight case must be able to hold four Zenit B200 lights together with accessories such as barn doors and diffuser filters for the lights. The diffuser filters should be stored in a pull-out drawer accessible from the outside, which must be lockable for transport. The flight case must have a detachable mains cable. The inside of the case should contain a distribution board to supply power or charge all lights while they are stored. The flight case must be able to be opened at the top with a lid, and the lid must remain open when opened using a lid lock with click-stop function. The lid must be able to be closed with standard flight case butterfly fasteners. The bottom of the case must be reinforced to accommodate four swivel castors fitted with 100 mm solid rubber wheels, two of which must feature brakes at the front (side of the open flap). There must be a recess in the lid to hold a tour label. There must be four recesses in the lid for stacking identical cases with castors. The four Zenit B200 lights must be able to be securely stored in a shockproof foam insert designed to fit the lights. It must be possible to disconnect the mains cable for transport via a plug connector. In order to carry the case, there must be large folding handles on at least two opposite sides. Two of these must be placed at the edge near the bottom of the case and one in the centre towards the lid.

Case walls: 9.5 mm thick birch plywood
AC output connector: powerCON TRUE1-compatible
Colour: Black
Dimensions: ≤ 600 × 600
Weight: ≤ 45 kg

Must be supplied with: 1× 1.5 m mains cable (included in the packaging content)
1× tour label (included in the packaging content)
