Brief description:

W-DMX™ + CRMX™ receiver with USB-A connector

Description text

The W-DMX™ + CRMX™ receiver must also be supplied via the light's power supply. An external voltage source will not be accepted. Rechargeable battery operation will not be accepted. The housing must be designed in such a way that it fits into an iDMX stick-compatible holder. It must thus be possible to insert or lower the stick more than halfway into the housing. The antenna must be removable and replaceable via a screw cap. Operation must be carried out with a push-button (one-button operation). The status must be displayed via a three-colour LED. The W-DMX™ + CRMX™ receiver must be compatible with the wireless solution protocols G3, G4s, G5 (2.4 GHz), and the LumenRadio protocol CRMX. In accordance with ANSI E1.11-2008, the data to be transmitted must be in DMX 512 format, on both the input and output sides.
